

ABSTRACT OF THE DISCLOSURE

~~To provide~~The invention provides a wiring layout of electric power lines, which ~~improves~~enhances the aperture ratio of the pixel while forming pixels with the same pixel pitch. An electric-optical apparatus according to the present invention ~~comprises~~includes multiple pixels~~(10)~~ arranged in matrix including electro-optical devices driven by receiving electric power from an electric power supply circuit, ~~wherein the~~The aforementioned multiple pixels~~(10)~~ make up multiple pixel groups formed of a series of pixels arrayed in at least one direction of the row direction and the column direction, and any of line forming regions~~(31, 32, 33, 34)~~ is disposed between adjacent pixel groups of the aforementioned pixel groups, ~~wherein the~~The aforementioned line forming regions~~(31, 32, 33, 34)~~ are formed with generally the same width.
